Crypt-O is a software solution that is built to store and secure a large amount of personal and important information. It's a tool that can be used at home or at the office as it allows you to create and populate a database which can contain just about any kind of information (passwords, credentials, PIN numbers, etc) and even files. With a lot of similar software that are widely available on the market, Crypt-O is unique in that it not only allows you to create, add, or modify existing databases, but also creates and manages a network of storages. That means that you can use it to secure and encrypt multiple folders and subfolders in a single database. Crypt-O comes with both server and client instances which means that you can either generate a new database and act as its administrator, or use it to access folders and information you are granted privileges to. The application uses 256-bit keys that are obtained using an AES algorithm along with SSL to encrypt network traffic, minimizing the chances of data being intercepted and stolen. Crypt-O is designed to handle multiple remote client connections at the same time and offers support for those who wish to connect via Dual-up, WAN or the Internet as it is compatible with a number of popular web interfaces. Create as many databases as you need With Crypt-O, you don't have to limit yourself to just one database.
